

Artificial turf maintenance specialists, *sweeping the country!*

### **The ATC Artificial Turf Cleaning Machine**

*The ATC has been designed to maintain artificial grass surfaces simply and effectively both indoors and outdoors. It will achieve a clean and even surface free of unwanted debris. It is fitted with three tools*

#### **1) Surface cleaner**

*This function removes smaller particles and waste from the playing surface, as the ATC moves along it causes the infill material and debris to bounce up into the sieve, which is equipped with a shaker mechanism. The sieve has a mesh size of 6 x 14mm, the rubber granules drop through and are worked back into the playing surface while other particles and debris remain trapped in the mesh. The pressure setting is infinitely variable and can be adjusted to the amount of granules in use.*

#### **2) Aeration**

*The ATC cleaner is equipped with 60x3mm steel prongs to loosen the rubber granules in the upper layer from 10 to 15mm. this ensures that the upper layer remains soft and aerated. This is also infinitely adjustable and can be lowered and raised according to requirements. It can also be lifted clear of the surface so that it is not in use. If the surface has joints that are failing or has tears this device should not be used.*

VAT Registration No: 833 3082 48 Company Registration No: 5099315. Registered office as below:

**The ATC Artificial Turf Cleaning Machine** (continued)

**3) Brushing**

*The ATC cleaner is fitted with brushes that are specifically made for artificial turf. The design is such that they avoid becoming clogged with loose fibres.*

*Again the brush can be infinitely adjusted for depth to ensure an even finish.*

**Technical Specification**

- Length 1640mm
- Width 2100mm
- Height 290mm
- Weight 76kg

*The ATC has a working width of 2 metres and can be towed by a small tractor, ATV or similar.*

*It is made from powder coated aluminium, stainless steel and polycarbonate.*

*It does not require any hydraulic or mechanical couplings.*
